REUSABLE BIOPSY FORCEPS

And engineered and manufactured to be both safe and easy to use. Tissue samples obtained with PriMed Forceps are characterized by their excellent quality and size. Therefore, we recommend

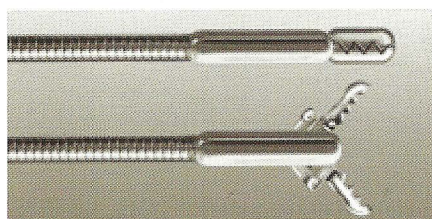

JAWS

- Surgical grade hardened steel maintains a keen cutting edge with repeated use.
- Design of the jaws and meticulous workmanship provide precise alignment of the cups for tight and even closure.

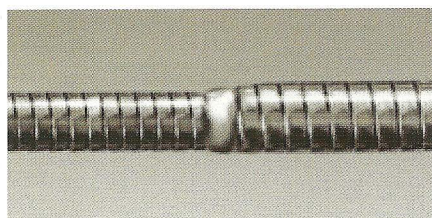

SPIKE

- Unique design assures a stable needle mounting, eliminating floppy needles and the danger of punctures to the channel of your endoscope.

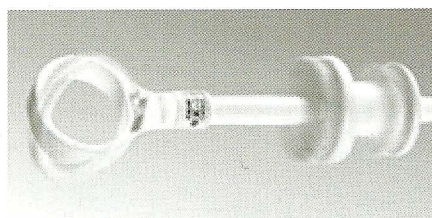

SHEATH

- Two-part, laser welded sheath features greater flexibility of the distal coil.
- This design promotes smooth passage of the forceps through the channel of a convoluted endoscope without interfering with its articulation.

HANDLE

- Autoclavable handle is constructed of durable engineering plastic.
- Ergonomically designed to be comfortable to use, lightweight and warm to the touch.

LABELS

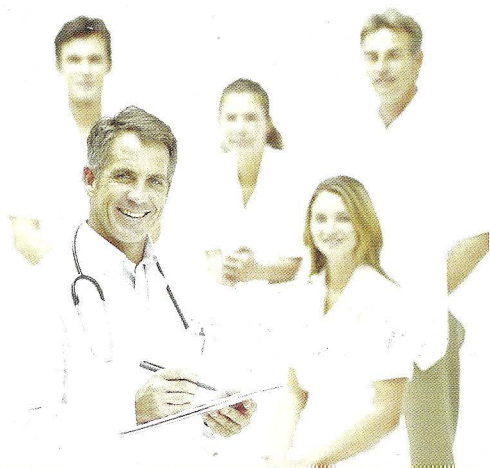

- Colour coded for easy identification of the instruments.

STERILIZATION

- Forceps can be sterilized using ethylene oxide, autoclave or soak methods.
