Micro Filter Syringe

Features

5 micron particulate filter

Sintered stainless steel

Benefits

Keeps particles on surface and within the body of its sponge-like structure; allows retention of smaller particles than its rating; more efficient than sieve-type filter; can trap more particles than standard surface-type filter.

Sterile, single-use, individually packaged, modified hypodermic needle; integral hub placed sintered, stainless steel, 5 micron particulate matter depth filter; stainless steel cannula; epoxy needle attachment.
